FORM-A-DRAIN® PLUS AND PLATON®

MOISTURE-PROOFING THAT BEATS WOOD FORMS AND DRAIN TILE

It takes the most advanced water drainage and prevention system to protect modern homes from moisture damage. Form-A-Drain Plus is an integrated concrete forming and drainage and radon venting system that outperforms wood forms and drain tile—from performance to time efficiency to labor costs.

Form-A-Drain Plus works together with our Platon waterproofing membrane to keep basements dry and customers happy.

PERMANENT, PRECISE FOOTING FORMS AND INTEGRATED DRAINAGE.

Form-A-Drain Plus consists of lineal sections installed as the foundation footing forms before residential basement construction begins. Unlike standard wood forms, Form-A-Drain Plus lineals stay in place permanently after completion of the concrete pour and form a complete sub-slab perimeter loop around the foundation.

By creating a drainage system as you set up footing forms, there's no need to purchase and install separate drain pipe. Each lineal section is manufactured with one slotted wall, allowing for water collection at the footing. The collected water then flows through the hollow core of the Form-A-Drain Plus system to the drainage outlet, where it's safely discharged away from the home or the sump pit.

THE FORM-A-DRAIN SYSTEM:

- Shaves valuable time from the construction schedule
- No need for a crew to return to remove, strip, clean and transport forms to the next job site
- Greater water intake capacity than perforated drainage pipe
- Foundation system provides drainage on both the exterior and interior sides of the foundation

Lineal sections, couplings and corners ensure precise form set-up.

30-YEAR DRY BASEMENT GUARANTEE

SUPERIOR TO TRADITIONAL FORMS: PUT THE ADVANTAGES TO WORK

FORM-A-DRAIN PLUS	WOOD FORMS	DRAIN TILE
Eliminates wood or metal form removal, cleaning and transportation costs	Additional labor to strip forms	Susceptible to crushing
Increased productivity: less elapsed time between footing pour and wall construction	Additional labor to clean forms	Difficult to keep level
Reduces material and labor associated with wood form and drain tile installation	Longer time to level, increasing labor costs	Poorly located
Consistent pricing that comes from wood forms	Wood pricing continues to climb	Additional labor step
Safer installation methods reduce the chance for expensive worker's compensation claims		
Ease and speed of installation allows for more project completions per week		

ONE-DAY INSTALL & ZERO SERVICE CALL BACKS
